Sir:

AMENDMENT AFTER FINAL (37 CFR 1.116)

In response to the Final Office Action mailed June 22, 1999, please
amend the above-identified application without prejudice as follows.

In the Claims:

Please cancel claims 2, 6, 8, 9, 14 and 16.

1. (Thrice Amended) An imaging apparatus for generating an
image signal from incident light with higher spatial frequencies of said incident
light limited to reduce undersampling artifacts, said apparatus comprising:
an image sensor for generating the image signal from an array of
photosites; and
an optical section having a birefringent uniaxial crystal [optical]
spatial filter interposed in a path of the incident light which removes a portion of
said high spatial frequencies in said incident light to produce a blurred image on
said photosites, said birefringent uniaxial crystal optical filter birefringence being
greater than 0.05, and said birefringent uniaxial crystal optical filter being lithium
niobate.
